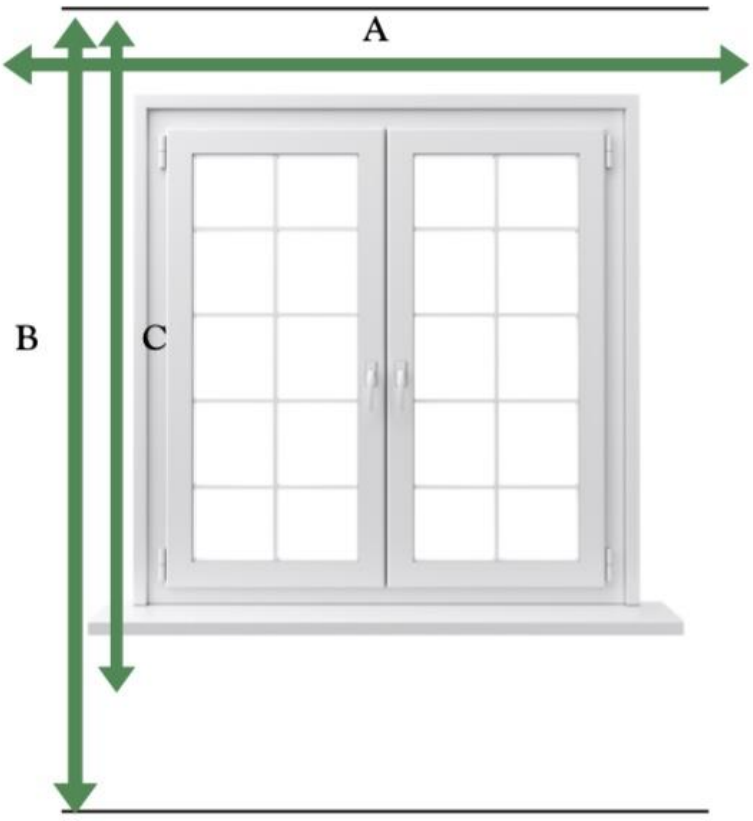
How to Measure for Curtains



A is the width of the window plus 20cm each side to allow for stacking, if you have the space.

B is the drop is the desired length of the curtain if it is to reach the floor. Take the measurement from the curtain pole or track hoops to the floor. If your curtain pole or track is not in place estimate this, be sure if your not using our fitter to tell your fitter this measurement. Then re confirm the measurement once the pole or track is in place.

C is the drop if you would like the curtain sit just below the sil. Take the measurement from curtain pole or track hoops to 10cm below the sil. Again as with B if the pole or track is not in place just provide an estimate of this.

For a quote please supply us with the following information

1. The measurements as appropriate above. Please contact us if you would like advice on pole position.
2. The desired heading- Eyelet, double pleat, triple pleat, pencil pleat, wave, or cottage pleat.
3. If you have a particular fabric in mind
4. Would you like them lined, or lined and interlined or blackout lined. Interlining is an extra layer between the lining and the main fabric. It makes the curtains look plusher and helps the curtains insulate in the cooler months and keeps the heat out in the warmer months.
5. Do you know the hanging system you would like track, poles, Pelmets?
6. Would you like us to quote including the hanging system?
7. Name the room for reference.
8. For best outcome please reconfirm the measurement once the pole or track is fitted however an estimate is fine for a quote.

No two windows are ever the same so sending us photos and or plans is a great help to helping us create the best quote for you.

Please provide all measurements in CM.

Room Name	Window No.	Curtain Type Heading	Width (cm)	Drop (cm)	Lining
